Let's Win Pancreatic Cancer

Let's Win is a go-to resource that guides patients and caregivers with vital information for better outcomes. Through a dynamic online platform available in English and Spanish, everyone who is diagnosed with pancreatic cancer—or individuals at higher risk—can have easy access to the most up-to-date knowledge about their disease.

Let's Win has become a trusted resource for the pancreatic cancer community, providing a wealth of readily accessible, easily understandable, and medically vetted resources to give pancreatic cancer patients and their caregivers a clear path for action as well as much-needed hope.

National Alliance for Hispanic Health

The National Alliance for Hispanic Health is the premier science-based and community-driven organization that focuses on the best health for all. Community-based members provide services to more than 15 million Hispanics throughout the U.S. every year and national organization members provide services to more than 100 million people annually. The Alliance works to ensure that health incorporates the best of science, culture, and community.

Pancreatic Cancer: By the Numbers

- About **67,400** people will be diagnosed with pancreatic cancer in the US this year
- The average rate of occurrence in the US is **13.7%** but for Black Americans that rate is **16.6%**
- The 5-year survival rate is about **13%**
- The symptoms mimic many other more common conditions
- The pancreas is deep in the body, so tumors are not found on a physical exam
- Most people are diagnosed at a later stage of the disease
- The most effective treatment is surgical removal, but most patients are diagnosed at a too advanced stage
- At this time, there is no easy screening test for pancreatic cancer

Where is the Pancreas?

Risk Factors and Screening

Types of Risk Factors

Pancreatic cancer cases are on the rise.

Risk factors:

- Lifestyle and behaviors
- Diseases
- Inherited or genetic mutations

Risk Factors: Lifestyle

- Smoking
- Obesity
- Heavy alcohol consumption
- Aging

Risk Factors: Disease

- Diabetes
- Pancreatitis
- Pancreatic cysts

Risk Factors: Inherited and Genetic

- Family history
- Known mutations including:
 - BRCA1/2
 - PALB2
 - CDKN2A
 - Lynch syndrome
 - Others

*Only 10-20% of familial pancreatic cancers are caused by known mutations.

Screening

- What qualifies you for screening?
- What tests do you undergo?
- Are there surveillance programs?
- Should you get genetic testing?

Andy's Story

- Family members lost to pancreatic cancer: 7
- Years of annual screening before diagnosis: 23
- Worked with an experienced doctor
- Surgeries: 1
- Rounds of chemo: 12
- Cancer detected in my body today: 0
