

Starting Treatment

As you start your treatment journey, here are some questions to help you start a discussion with your doctor about what to expect.

1. What are the different types of chemotherapy?
2. What is my treatment plan – how many weeks of chemotherapy?
3. Are there other options?
4. Will I be able to have surgery to remove the tumor?
5. How long will each treatment take and what will the schedule look like?
6. How do we determine if the treatment is working or not?
7. What are the potential side effects of the treatments?
8. Who is on my treatment team? Do they meet as a group?
9. How can I manage side effects related to chemotherapy or surgery?
